## **PUBLIC LIBRARIES IN 2005**

### **Discussion of Selected Aspects**

#### **INTRODUCTION**

The 35<sup>th</sup> yearbook "Public Libraries in Figures" 2005 presents the condition and activity of public libraries in the seventh year of their operation in the three-degree national territorial division structure, re-introduced in 1999 (previously Poland had such a territorial division from 1945 to 1974).

The present yearbook basically preserves the same structure and data arrangement as the previous one, where a broader range of data was introduced on automation of public libraries, information on the number of libraries merged with other institutions and located in the wheelbound user-friendly facilities, subscription expenditures and the electronic documents' collection size and their use.

In the 2005 tables we introduced several indispensable corrections to rearrange and complement the indices. These changes result from a broader range of data introduced in the 2004 yearbook.

#### **THE NETWORK CONDITION AND STRUCTURE**

According to the Central Statistical Office (GUS) data in Poland in 2005 there were 2,636 public libraries and 5,955 library branches, making together 8,591 library entities. The public libraries' network, compared to 2004, decreased by 62 entities (0.7 per cent), including 17 libraries and 45 branches.

More library entities were closed down in rural areas (48, i. e. 0.8 per cent) than in towns (14, i.e. nearly 0.5 per cent). The proportion of the number of entities between towns and rural areas did not change; the latter constituted almost two thirds of the total number of library entities in Poland, which has been an almost unchanged value for several years.

The drop in the number of libraries and branches resulted in the further increase of the average inhabitants' number per one library entity from 4,412 to 4,442.

In 2005 every fourth library entity operated as a dependent unit, i.e. in another institutions' structure, not necessarily being an institution of culture. Around 83 per cent of such library entities operate in rural areas. Merging a library entity with another organization structure often entailed losing the name of a „public library” and the legal status of an institution of culture.

## AUTOMATION

In 2005 3,688 (nearly 43 per cent) libraries and library branches in Poland had 17,094 pcs at their disposal. The number of entities making use of computers grew by 704, i.e. as much as 23.6 per cent, and the number of pcs by 4,244 (33 per cent).

The gap between towns and rural areas in terms of library automation visibly decreased. Though the number of automated libraries in rural areas is lower nearly by half (34.3 per cent) compared to towns (almost 59.8 per cent), and the rate of growth of the number of pcs in 2005 compared to the previous year turns out to be only slightly over one third lower than in towns (1,656 versus 2,588), and in percentage terms in 2005 the number of pcs in rural areas grew by 43.9 per cent, and in towns by only 28.5 per cent. This augurs well for making library hardware equipment levels in rural libraries and in urban libraries equal.

Out of the total number of 17,094 computers in 2005 12,051 (70.5 per cent) microcomputers worked in local library networks, 691 (4 per cent) in the networks of other institutions and – as many as 4,352 (25.5 per cent) as autonomous units; 13,449 machines (nearly 79 per cent) were connected to the Internet, of which 7,597 (56.5 per cent) were accessible to users, but the number of computers accessible to users in general went up by almost 1,300 units (8,893). Over 43.4 per cent of computers were used in library-bibliographic work (which makes 1,336 machines more, but the percentage share of computers used in basic library work was slightly lower than a year before – by 4 per cent). The number of machines used in acquisitions, collection processing and bibliography went up (from 3,833 in 2004 to 4,588 in 2005, i. e. by almost 20 per cent). Also the number of machines used as cataloguing terminals grew; from 1,258 in 2004 to 1,651 in 2005 (a 31.2 per cent growth). Users' and access registers were maintained by 1,053 computers (146 more than a year before).

On the average one automated library entity in Poland possessed 4.6 machines (4.3 in 2004), and the general average per one library entity in a network was almost 2 computers (1.5 in 2004). In rural areas the average number of computers per one library entity was almost one, and per one automated self-standing library entity – 2.8. In towns the figures showed respectively 4.0 and 6.7 computers.

## LIBRARY POINTS

Library points, providing a complementary library service to the public libraries' network, have undergone serious reduction for many years and continue to have an increasingly marginal role in library user services. Their number in 2005 went down by another 59 units (over 3 per cent of the 2004 figure) to the level of 1,752. Their services were used in 2005 by as little as 1.7 per cent of users in a public libraries' network and 0.33 per cent of the total population. This translates into 125.5 thousand users (5.8 per cent less than a year ago), who borrowed 1,589.9 thousand volumes (less by almost 6 per cent). One library point was used on the average by 72 users (74 in 2004). One user borrowed almost 13 books per one point on the average, and the average number of loans per one point was 907 (in 2004 – 934).

## COLLECTIONS

In 2005 public libraries' collections reached 135,128.5 thousand volumes of books and serials (excluding rare collections), i. e. the number grew by 673.1 thousand volumes (0.5 per cent) compared to 2004. Urban libraries' collections grew during 2005 by 481.9 thousand volumes (0.6 per cent), rural libraries gained 191.3 thousand volumes (0.3 per cent). The year 2005 is only the second year of growth in a row following a systematic decreasing tendency recorded since 1996 until 2003. The nationwide index of the number of volumes per 100 inhabitants was 354 (rise by 2 volumes, i. e. 0.6 per cent).

The acquisitions in 2005 totalled 4,586.3 thousand volumes (655.5 thousand more compared to 2004), including the purchase of 3,436.4 thousand volumes from local government funds and the Ministry of Culture grant (ca. 75 per cent of acquisitions in total).

Withdrawals (losses/disposal) were higher than in 2004 by 221.5 volumes and reached 3,894.7 thousand volumes in 2005, which accounts for ca. 2.9 per cent of the previous year's collection. The relative level of withdrawals also went up to 10.2 volumes per 100 inhabitants.

It was the second year in a row of the new titles purchase index rise following the many years of systematic decline since 1990 until 2003, and a serious one fort that matter: from 6.6 to 9.0 volumes per 100 inhabitants. This results from the Ministry of Culture grant.

The expenditures on book purchases per one inhabitant grew from 1.37 PLZ in 2004 to 1.81 PLZ in 2005 (by 0.44 PLZ), and the expenditures per one library user rose from 6.95 PLZ in 2004 to 9.42 PLZ in 2005.

## AUDIO-VISUAL AND ELECTRONIC COLLECTIONS

In 2005 the number of the analyzed collections went up by 23.7 thousand inventory units (by 0.9 per cent). It was the second year in a row of moderate growth of these collections, after a drop recorded in 2003 (by 1.4 per cent).

A very high growth of electronic documents was recorded in 2005, by as much as 19 thousand, i.e. 42.5 per cent. The collection reached the level of 64.2 thousand inventory units. Both in the category of audiovisual materials and electronic documents the collection percentage growth is higher in rural areas than in towns (audiovisual by 4.4 per cent, electronic by 45.2 per cent!).

Together the audiovisual materials and electronic documents made up over 2,614 thousand inventory units, i. e. 1.9 per cent of the public libraries' collection in Poland.

The on-site access and loans of audiovisual materials generally dropped in 2005 to 3,562.9 thousand units, e. g. by ca. 34 thousand (1 per cent) compared to 2004. However, this does not refer to rural libraries where the access was greater by ca. 950 units (1.6 per cent) than in 2004. The access and loans' figures for electronic documents almost doubled and neared as much as 1,259.8 thousand (rise by ca. 626 thousand, i. e. 99 per cent). It is the second year in a row of such a serious growth in on-site access and loans in this category.

## USERS

The year 2004 saw the breakdown of the previously uninterrupted growing trend in the public library users' absolute number recorded since 1992. In 2005 the total number of registered users in all libraries, branches and library points dropped to 7,337.3 thousand users, i. e. by 171.2 thousand (2.3 per cent) compared to 2004. The number of users fell both in towns (by 132.7 thousand, i. e. 2.4 per cent) and in rural areas; (by 38.5 thousand, i. e. 2 per cent). This time the drop in the

number of users was nearly four times larger than the network reduction in percentage terms (0.6 per cent), being a totally new, previously unregistered development.

The drop in reading was recorded also in the relative index: in the „total” category public libraries were used in 19.2 per cent of the population (0.5 per cent less compared to 2004), in towns by 23.3 per cent (also 0.5 per cent less compared to 2004), and in rural areas by 12.8 per cent (0.3 per cent less than in 2004). Also the average number of users per one library entity in the „total” category went down from 868 to 854, i. e. by 1.6 per cent.

The drop in the number of users is striking, and the more so that the offered collections were refreshed over the past two years by adding new titles purchased from the Ministry of Culture grant, whereas the current automation data reveal a quite serious progress in modernisation of library infrastructure. In this situation the causes for regression in reading need to be sought not as much in the issues related to the network organization, book supplies or technical infrastructure, as in the far more general socio-cultural developments, and first and foremost in the ever more intensive departure of younger generations of Poles from the book as the main source of information, education and entertainment.

## THE STRUCTURE OF USERS

Public libraries are used by representatives of whole society. According to the corrected distribution of users' structure by age groups<sup>1</sup> in 2005 users up to 15 years of age (end of the school duty) made up slightly over one fifth of the total number (28 per cent in a raw distribution), up to 19 years - as much as 56 per cent of the total number of library users (46 per cent in a raw distribution), and up to 24 years – 84 per cent (63,7 per cent in a raw).

Compared to the previous year there was a shift in the user age structure towards older age groups. In all sections up to 24 years of age the library user fractions went down, whereas in all sections above 24 years of age the library user fractions increased. However, still only 16 per cent of the public library clients are people above 24 years of age (36.3 per cent according to the raw distribution).

---

<sup>1</sup> We present data in two versions: the “raw” data, i. e. taken over from the summary K-03 GUS sheet, contained in classes of unequal range, which is correct from the point of view of age-specific features and is justified by age-specific reading behaviour; however, the unequal section ranges prevent indicating the correct dominant, thus next to the “raw” distribution we provide the corrected distribution (weighted by the number of years).

This shifting of the dominating category in the direction of the earlier years of birth follows not only from the demographic low and the growing fractions of older persons in the Poland's population structure, but also from the shifting of the educational requirements (foreign language learning, staff professional development, a growing trend to acquire new, formal education and/or specialization) towards the ever older persons.

In the user structure by „occupation” no significant changes occurred compared to the previous year. School pupils constituted 48 per cent of the reading clientele (0.9 per cent less compared to 2004, parallel to their declining share in the age structure), students – nearly 13 per cent (slight increase by 0.2 per cent), white collar workers – 14 per cent (more by 0.4 per cent), the unemployed – 15.7 per cent (increase by 0.3 per cent). The share of farmers among public library users is still alarmingly low (0.9 per cent), whereas blue collar workers account for only 5.6 per cent of the total number of users.

## LOANS

The loans from all libraries, branches and library points in 2005 covered 145,027.3 thousand inventory units, including over 141,231.1 thousand volumes of books and serials and 3,796.2 thousand inventory units of rare collections. This shows a decline in the number of loans by ca. 7,164.4 thousand (4.7 per cent) during the reported year. In towns the loans went down by 5,621.3 thousand (5.0 per cent), and in rural areas by 1,543.1 thousand (3.8 per cent). The drop scale was nearly five times higher than in 2004 in relation to 2003. Also the loans index per 100 inhabitants went down to 380.

The number of loans per one user fell visibly both in the „total” category (from 20.3 to 19.8 in 2005), in towns (by 0.5) and in rural areas (by 0.4).

The strong breakdown in the absolute number of loans and derivative indices in 2005 comes as a surprise and is hardly understandable, similarly to the decreasing aforementioned indices of the social reach of reading. The growing trends in the number of users seemed quite stable for a couple of years, and from 1999 to 2003 the loans index's rise or fall oscillated within 1 per cent.

## ON-SITE ACCESS

In 2005 public libraries offered 108,519 reading room seats, i. e. 471 (0.4 per cent) more than a year ago. It is, however, worth stressing that after four years of decline in the number of reading room seats, in 2005

a significant growth of their number was recorded. The general positive balance resulted from the growth by 490 reading room seats in towns and combined with the drop by 19 in rural areas.

The statistics of on-site access in the last decade showed average yearly growth of 5 per cent in the last decade, excluding 2003 which showed a slight decline (by 0.1 per cent). As anticipated it turned out that the drop recorded in 2004 was not incidental: the 2005 saw a further, almost triple drop, as high as by 1,840,626 volumes (4.6 per cent) of books and serials accessed on-site.

## LIBRARY SPACE

In total the public library office space in 2005 grew to 932,162 sqm, i.e. by 6,827 sqm, i.e. by 0.7 per cent which is close to the growth level in 2004 compared to 2003 (0.9 per cent). The increase of library space was found both in towns (by 3,991 sqm, i.e. also ca. 0.7 per cent), and in rural areas (by 2,836 sqm, which in percentage terms was slightly higher than in urban libraries, i.e. 0.8 per cent). The average space per one library institution was ca. 108.5 sqm, i.e. 1.6 sqm more, and respectively 197 sqm per one library (regardless of the category) and ca. 70 sqm per one branch. The size of branches for children and young people grew to 99 sqm. In towns the average size of a library entity was 203 sqm, and it was three times smaller in rural areas – 60 sqm.

## LIBRARY STAFF

The total number of public librarians grew in 2005 by 56 persons (0.3 per cent) and reached 17,528 persons. It is the second year of employment growth (the previous year's growth was almost twice as big), following a slump in employment from 2001 to 2003.

The number of full-time employees grew by 129 (1 per cent), chiefly in urban entities (by 124, in rural libraries only by 5 persons). The share of full-time employees in 2005 exceeded 74 per cent of the total number of employees.

The statistical data for 2005 confirm the favourable tendencies seen for over 10 years in the changes in the library staff education structure. The number of staff with university/college-level education went up by 445 employees (10 per cent), whereas the share of librarians with secondary-level library education dropped by over 230 persons (3.2 per cent); also the share of employees having no professional library qualifications decreased by nearly 160 persons (2.7 per cent).

The average number of users per one librarian dropped to 419 (by 11 persons compared to 2004, i. e. 2.6 per cent), whereas the loans per one library staff member dropped to 8,274 (by 437, i. e. by 5 per cent).

## FINAL COMMENTS

In the fifteenth year of public libraries' operation under the aegis of local governments and in the seventh year after the administrative reform in Poland, which brought back a three-degree national territorial division structure, thus also a matching public library network structure, all indexes determining the reading levels in public libraries in 2005 dropped significantly, confirming a tendency that formed the year before.

The many years' statistical observation indicates that one of the main causes of declining reading levels in public libraries is the fact that the attempt to refresh and strengthen the collections by allocating a grant from the state budget was made at least a few years too late. The dramatically low level of new titles' supplies was signalized already from mid 1990s. The amounts approved by local governments on new titles' purchases continue to be too low, insufficient to reconstruct the collection after many years of drastic reduction of expenditures on libraries. Despite the ministry of culture grant the new titles' purchase index (9.0 volumes per 100 inhabitants) is only half as high as the standard set in 1981 (18 volumes) and four times lower than an average value of this index in other EU countries.

Another important cause seems to be the still incomplete adjustment of the public library network to the country's administrative structure following a reform introduced several years ago. The statutory duty to establish libraries at the powiat level was put into effect in slightly more than three-thirds of the powiats.

The experience gained during the many years' observation and analyses made by the team working on the present publication lead to a conclusion that it is indispensable to support libraries from the central government funds. In culture the changes do not occur overnight, the expenditures on libraries may result in a growing range and intensity of reading only on a long-term basis. It would also be advisable that the pro-active policy of the ministry of culture in the recent years covers also a second, very important, but neglected area in public libraries and namely their systematic and systematized automation. This consists not only in financial, but also logistic support, in bringing in financial incentives that will encourage the libraries to install one, inexpensive, but also efficient public library computer system.

14. wielkopolskie	8	0,75
15. świętokrzyskie	14	0,72
16. pomorskie	16	0,63

*The index of the material-organizational base covers 6 indices by voivodships, shown in the order of their named values in detailed tables XIII/1 to XIII/6 (in terms of content they constitute equivalents of coefficients given in the administrative order of voivodships in table 13).*

*The index value* is in the arithmetical sense a simple arithmetical mean value of indices standardized for each voivodship, calculated according to the rules given below from table XIII/1 to XIII/6.

*The standardized index* is a quotient of the named value by an arithmetic average value of a given named distribution, calculated for each voivodship. Solely with reference to table XIII/1 each obtained result was still subtracted from 1, to make the formal direction of the standardized index compatible with its content (the „number of inhabitants per one library entity” index needs to be interpreted according to „the more the worse” rule , thus the „subject-related” and numerical directions of the index must be divergent). Referring to the remaining indices in this index the growth of the formal value is convergent with the subject-related value („the more the better” rule).

Table XIII/1

**Voivodships in order of the population per 1 library or 1 branch**

	population	standard score
1. podkarpackie	2 998	0,32
2. opolskie	3 223	0,27
3. lubelskie	3 573	0,19
4. lubuskie	3 724	0,15
5. warmińsko-mazurskie	4 105	0,06

14. mazowieckie	5 092	-0,16
15. śląskie	5 578	-0,27
16. pomorskie	6 356	-0,45

mean 4 390

The standardized index in col. 3 of this table constitutes a difference between one and the value of the quotient of the named index for a given voivodship by the arithmetical mean value of the distribution of this index. The operation of subtracting the value of the quotient from one results from the need to obtain opposite directions of the subject-related and the arithmetical index value.

Table XIII/2

The service burden index covers 5 indices by voivodships, shown in the decreasing order of their named values in detailed tables from XIV/1 to XIV/5 (in terms of content they are equivalents of the coefficients given in the administrative order of the voivodships in table 14).

The index value is in the arithmetical sense a simple mean value of indices standardized for each voivodship, calculated according to the rules given below from table XIV/1 to XIV/5.

The standardized index is a quotient of the named value by an arithmetic average value of a given named distribution, calculated for each voivodship.

In all indices within this index a decreasing direction was adopted, according to „the more, the worse” rule (a greater burden).

Table XIV/1

**Voivodships in order of number of readers  
per 1 library or 1 branch**

	readers	standard score

The efficiency index covers 5 indices by voivodships, shown in the increasing order of their named values in detailed tables from XV/1 to XV/5 (in terms of content they are equivalents of the coefficients given in the administrative order of the voivodships in table 15).

The index value is in the arithmetical sense a simple mean value of indices standardized for each voivodship, calculated according to the rules given below from table XV/1 to XV/5.

The standardized index is a quotient of the named value by an arithmetic average value of a given named distribution, calculated for each voivodship.

Contrary to the „burden” index for all indices within this index an increasing direction was adopted, following „the more the better” rule (a greater „efficiency”).

Table XV/1
